The word "philosophy" derives from the ancient Greek word *philosophia*, which is translated as "the love of wisdom." For most of recorded history, those who have investigated questions about human experience have been called philosophers. As satisfactory descriptions and working definitions were formulated to resolve some of these questions, the individual sciences branched off and became separate disciplines. The questions that remained unanswered constitute the subject matter of philosophy as it is currently studied.

BEH 201

Department of Philosophy
Philosophy B.A.
