

maintain communications focused on Tampa

- 

Dr. Sunol presented a slide presentation which is attached.

The council asked if USF will get any patents or royalties from the project. There is patent applications currently in place. The royalties are typically split with the University and the inventors. There is a possibility to enhance the royalties that will go to separate enterprises, but those enterprises may pay the university. These enterprises are being looked at and the university is aware of this. Patents aren't as easy on this project.

The chair asked if December 2018 ~~currently~~

- The council may want to consider splitting cost savings 50/50 with the departments as an incentive. Research of what options are available to the council would need to be the first step. The chair suggested that this could be an SGEF project.
